Re: Chempro Kent Off-Site Response Policy Status

Dear Mr. Stefani:

This letter addresses whether your Pier 91 facility is acceptable, under the Off-Site Policy of the Environmental Protection Agency (EPA), for receipt of waste shipments from Superfund cleanup sites.

On March 1, 1990, EPA determined that the facility was unacceptable to receive off-site waste due to the detection of a release from the facility. EPA transmitted this determination to the facility in a letter dated March 1, 1990, and the determination became effective sixty (60) calendar days after that date.

As a result of your consent to a corrective action order to control the release, Chempro Pier 91 is no longer determined to be unacceptable to receive and handle hazardous substances generated by response and enforcement actions taken pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act and Section 7003 of the Resource Conservation and Recovery Act.

The eligibility of the facility may change, as EPA and state compliance monitoring are on-going. If the eligibility should change, you would be notified pursuant to Section 121(d)(3) of the Superfund Amendments and Reauthorization Act of 1986.

This letter is not intended to indicate or to otherwise certify facility compliance with all applicable environmental regulations. It is intended only as a statement of the facility's eligibility under EPA adopted procedures for planning and implementing off-site response actions.

If you have any questions please contact Al Odmark at 442-1886.

Sincerely

Charles E. Findley, Director
Hazardous Waste Division
